Mukul Vashisht

Senior Software Engineer @Careem (Uber) | Backend | Golang, Java | Distributed Systems | Ex-Gojek, Swiggy
Bengaluru, Karnataka, India

Summary

I'm a Software Engineer with over 5+ years of experience building high-scale backend and platform systems using Golang, Java, Node.js, and Python. My work spans microservices, real-time APIs, and distributed event-driven architectures, powering applications that serve millions of users.

Currently at Gojek, I focus on the Communications Platform, where I design and optimize high-throughput messaging pipelines built with Kafka, Redis, PostgreSQL, and Kubernetes, ensuring performance, reliability, and observability at scale.

I'm passionate about building resilient backend platforms, improving developer experience, and solving large-scale system challenges. Lately, I've been exploring the intersection of AI and blockchain — combining decentralized systems and intelligent automation to design the next generation of scalable, trustworthy software.

I'm open to backend or platform engineering roles across Europe or remote opportunities globally.

Experience

Careem
Senior Software Engineer (Golang) (contract)
February 2026 - Present (4 months)
Dubai, United Arab Emirates

Working on Golang-based ride fulfillment services integrating with Uber's ecosystem to serve Careem users

GoTo Group
Senior Software Engineer - Platform Engineering
January 2025 - February 2026 (1 year 2 months)
Bengaluru

- Led Golang-based Notifications platform serving millions+ messages/day, adding new capabilities and ensuring 99.9%+ uptime.
- Designed and delivered end-to-end Number Masking in Chat as a Golang microservice to protect user privacy.
- Improved reliability and observability across Golang-based messaging microservices with Kafka, Redis, and monitoring tools.

AJIO.com
Software Engineer - 2
March 2023 - December 2024 (1 year 10 months)
Bengaluru, Karnataka, India

- Developed multi-tenant event-driven microservice architecture using Kafka for catalog's automatic quality check. Reduces the new tenant boarding time by 60% and improves system efficiency by 23%.
- Designed and developed microservices from scratch to integrate third-party APIs like H&M Inventory API.
- Implemented SAML authentication with Reliance SSO and an authorization system for the seller central platform, using Istio in Kubernetes for microservice-to-microservice communication.
- Participated in on-call rotations, proactively managing and resolving production issues to ensure system stability and uptime.

Swiggy
Software Engineer
May 2021 - January 2023 (1 year 9 months)
Bangalore Urban, Karnataka, India

- Migrated 1.6 million SwiggyOne User's data from one single global offer to customer-level offers Using AWS and Databricks pipeline. Achieved smooth migration of User's data.
- Worked on Shadow Coupons project using Golang, designed and Implemented business logic for shadow coupons in cart apply pipeline, increasing Swiggy savings by 30-40% on gamification coupons. Later this pipeline got used in other flows also.
- Designed and Implement a pipeline for applying coupons on SwiggyOne Membership Plans as a part of a differential plan pricing project. As a part of this project worked on multiple services using Golang and Java.
- Upgrade SwiggyOne service from Spring Boot version 1 to version 2, by migrating the Redis cluster client from Jedis to Lettuce and metrics to the micrometer. which optimized Service overall performance.

- Worked on building Swiggy Premium Membership Plan (SwiggyOne) using Golang, java, and DynamoDB. Swiggyone Offers got nudged to 20 million users and applied for 1.6 million users.
- Worked on deprecating legacy coupon service and migrating REST apply coupon API to GRPC-based coupon Apply coupon pipeline.
- participated in on-call rotations, proactively managing and resolving production issues to ensure system stability and uptime.

Biofourmis
Software Engineer
October 2020 - May 2021 (8 months)
Bengaluru, Karnataka, India

- I Worked on Implementing CRUD API with filter and pagination support for different microservices as a part of the Remote Patient Monitoring(RPM) project. RPM helps enables doctors to monitor patient's health remotely.
- I Worked on implementing nested Questionnaire functionality using the Depth First Search Algorithm.
- Used Kafka to communicate between different microservices.
- Worked on developing frontend using ReactJs.

Crio.Do
Student Developer
February 2020 - April 2020 (3 months)

During this program I worked on various projects:-
1) QBox - QBox is a secure file-sharing service. It is a customized version of the popularly available VSFTPD server.
- Created pre-install scripts to run system checks, install and configure QBox.
-Developed tools to automatically analyze performance and functionality issues in different versions of QBox.
2) QMoney - It is a visual stock portfolio analyzer. It helps portfolio managers make trade recommendations for their clients.
- Implemented the core logic of the portfolio manager and published it as a library.
- Refactored code to add support for multiple stock quote services.
- Improved application stability and performance.
3) QPrep - This micro experience was to learn and practice algorithms in a structured way.

Dietitio
Web Development Intern

June 2018 - July 2018 (2 months)
Dwarka Area, India

- Worked on adding multiple features to the CRM dashboard.
- Implemented a function to handle different types of requests in Django.
- Add real-time functionality in CRM using the Django channels module.

Education

Guru Gobind Singh Indraprastha University

Bachelor of Technology - BTech, Cse · (July 2016 - September 2020)
